**"The deficit in genetic gains in recent decades may be viewed as a clear indication of the need of breeding programs in Spain to ensure future cultivar enhancement"**

## Metabolome (GC-TOF-MS)

Principal Component Analysis: anthesis  
Environment x Organ x Cultivar

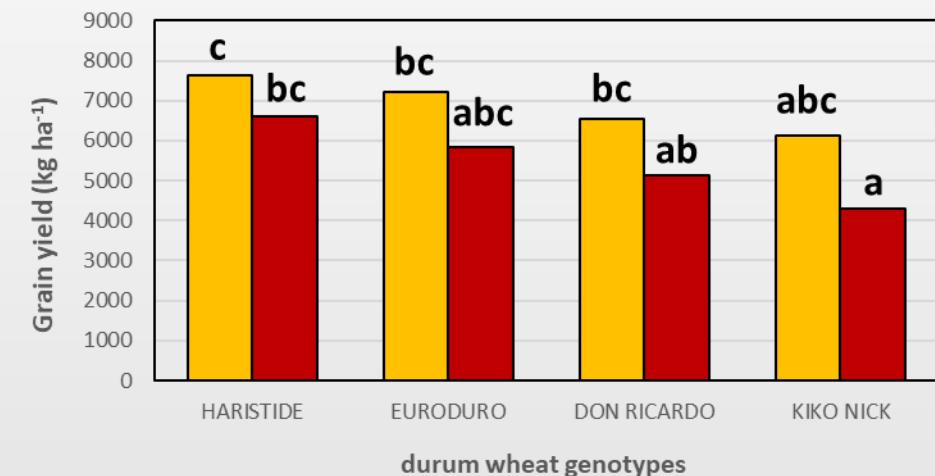

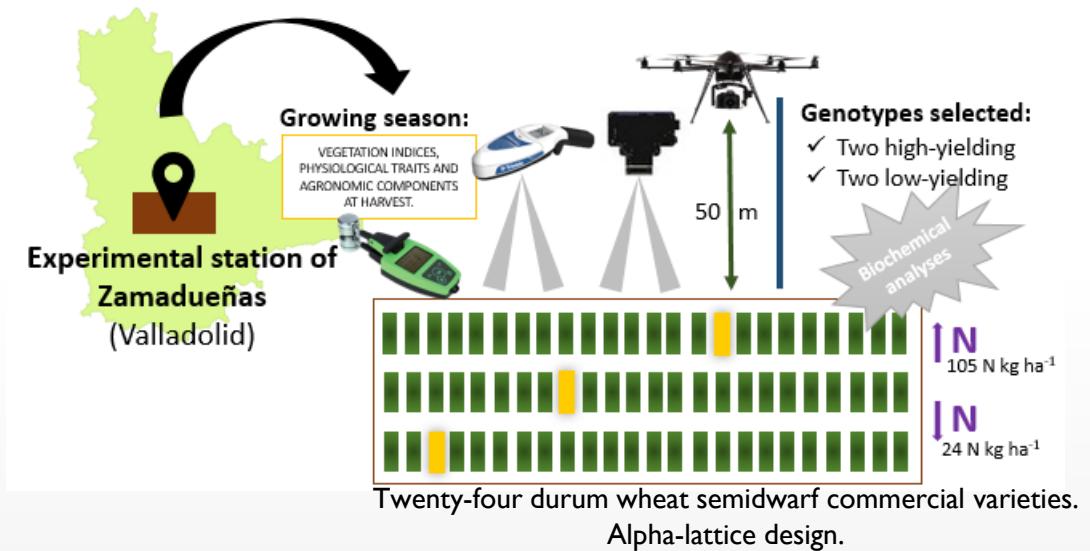

Vergara et al. (2020) Cells

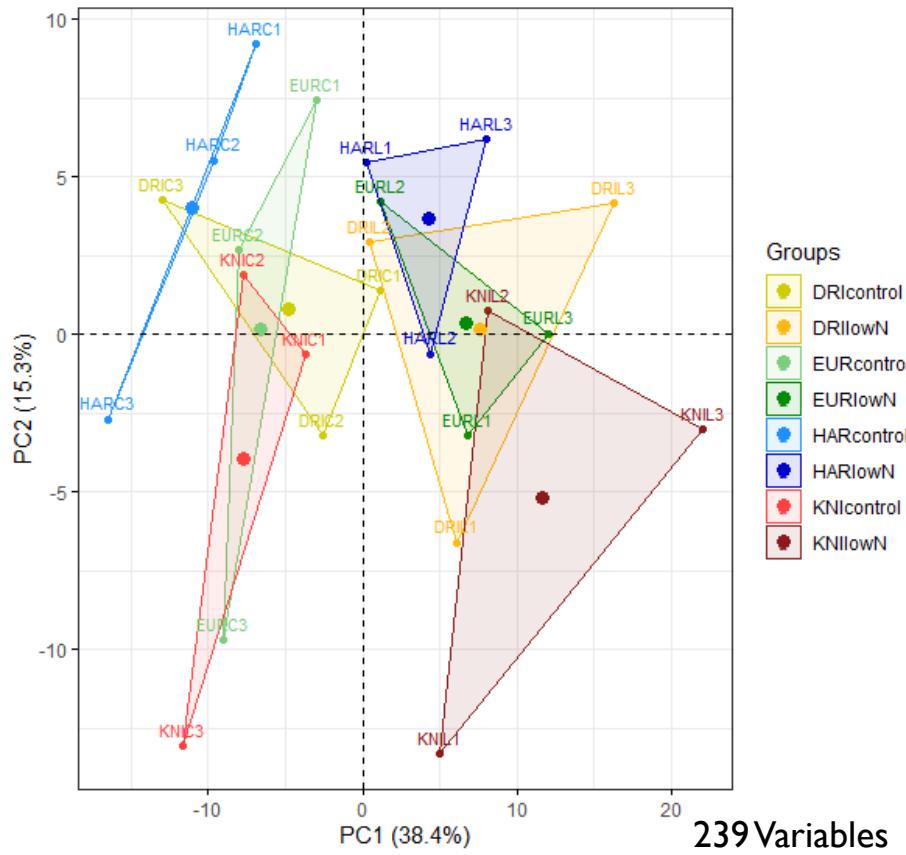

## OBJECTIVES:

- (i) identify the specific phenotypic attributes that are related with grain yield and quality
- (i) the relative carbon/nitrogen contribution of **laminar** and **non-laminar** photosynthetic organs to developing grains.
- (ii) the effects of nitrogen availability.

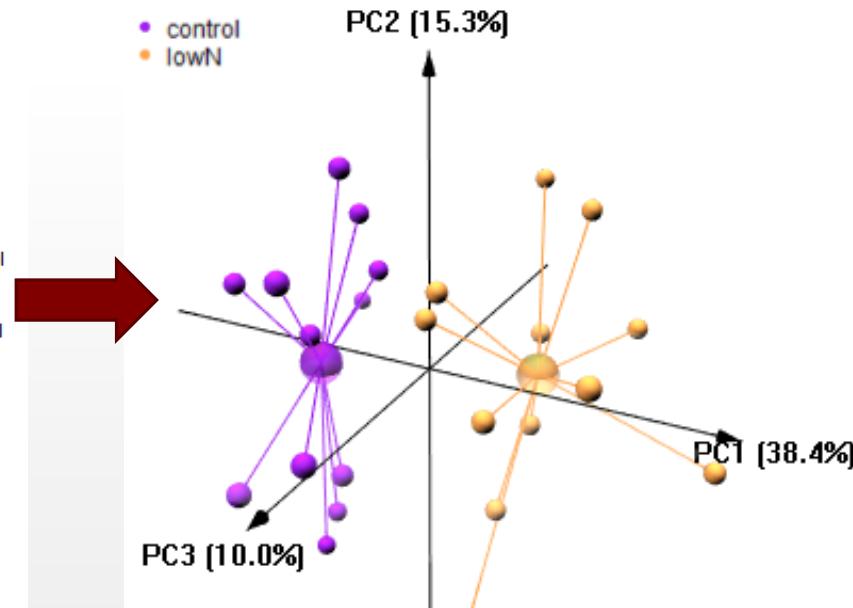

## MATERIALS AND METHODS

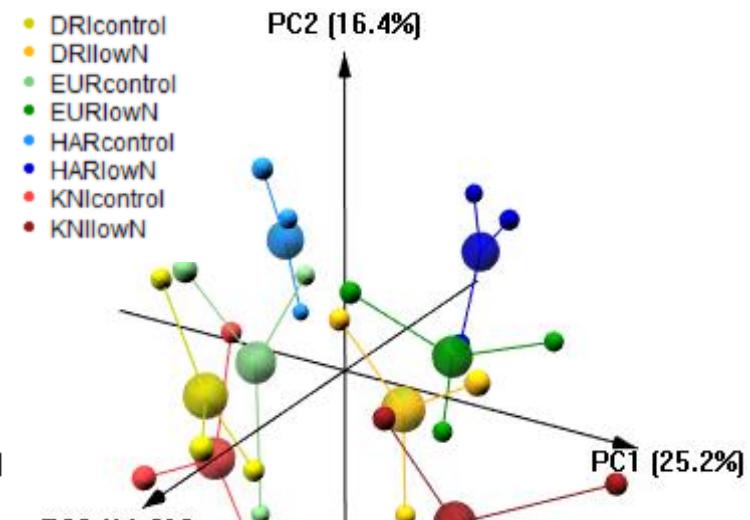

# CROP SEASON 2017/2018: PHYSIOLOGICAL TRAITS

## NITROGEN EFFECT

## GENOTYPE VARIABILITY

# Thank you!
